

SEPERATOR CLUTCH RELAY KIT

In heavy crop conditions, we have experienced a lot of clutch slippage problems. After installing a clutch relay kit, the slippage problems have dropped extensively. When the combine is running hard and all lights are on, the electrical system is working hard. In this condition , voltage to the clutch is lower than necessary and the magnets will not be able to hang onto the armatures. This kit allows true battery voltage straight to the clutch. By adding this kit you can save yourself money and downtime.
